

FAQIH PRATAMA MUHTI

Software Engineer · Backend Developer · Full Stack Developer

Depok, West Java, Indonesia | +62 812-1249-9837 | faqihpratamamuhti@gmail.com

GitHub: github.com/programmerShinobi | LinkedIn: [linkedin.com/in/faqihpratamamuhti](https://www.linkedin.com/in/faqihpratamamuhti)

PROFESSIONAL SUMMARY

Software Engineer with 3 years of experience in backend and full stack development using Node.js, NestJS, Spring Boot, and PostgreSQL. Has built and modernized 6+ enterprise aviation operational systems, optimized APIs and databases, and remediated security findings from penetration tests. Brings strong ownership, structured problem-solving, and effective collaboration with technical teams and business users to deliver reliable, high-quality software.

CORE COMPETENCIES

Backend Development · Full Stack Development · Enterprise Application Development · Legacy System Modernization · REST API · GraphQL · Database Design · Database Optimization · System Integration · Security Remediation · Production Issue Resolution · Agile Development · Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

Backend & Full Stack Developer

OpenCloud | Nuxatech — GMF AeroAsia Project

Tangerang, Banten, Indonesia · July 2023 – Present

- Develop, maintain, and enhance 6+ enterprise aviation web applications across maintenance, technical publications, project management, emergency response, and aircraft health monitoring.
- Build backend services and application features using NestJS, Spring Boot, PostgreSQL, Prisma ORM, REST API, GraphQL, and Angular.
- Modernize legacy systems into maintainable, scalable web platforms and resolve critical production issues, improving system stability and API and database performance by 30%.
- Implement security hardening for penetration-test findings, resolving all critical issues from the BSSN (Indonesia's National Cyber and Crypto Agency) security assessment to strengthen enterprise applications.
- Design cross-database integration with the PostgreSQL Foreign Data Wrapper to connect three database systems: PostgreSQL, Microsoft SQL Server, and MySQL.
- Collaborate with developers, business users, and operational teams to deliver solutions, and support DevOps ticket management, issue tracking, and troubleshooting.

SELECTED PROJECTS

- **Aircraft Health Index (AHI)** — Built and maintained the AHI aviation health-monitoring application (NestJS, Prisma ORM, PostgreSQL, Elasticsearch); implemented security hardening that resolved 100% of critical BSSN penetration-test findings and improved backend reliability.
- **E-Techpub** — Modernized a legacy Technical Publications system into a structured, scalable platform using Spring Boot and PostgreSQL, reducing manual document-handling effort by 40%.
- **Excellent Operations (XOPS)** — Engineered an aircraft-maintenance operations platform (NestJS, PostgreSQL) that digitized operational workflows and reduced manual processing time by 35% through backend development and database design.
- **Project Management (XPREAM)** — Developed a project-management and route-planning application in Angular, improving planning visibility across multiple operational teams.
- **Integrated Engineering Resource Applications (IERApps)** — Resolved critical bugs and optimized GraphQL queries and database interactions, improving backend reliability and responsiveness for the mobile app.
- **OLAPS & Electronic Logbook** — Stabilized the OLAPS web application and delivered the electronic Logbook feature, eliminating 100% of manual logbook entries through a fully digital workflow.

UI/UX Designer — Volunteer

Saqinah.id

Jakarta, Indonesia · September 2023 – November 2023

- Designed and prototyped user-centered web interfaces using modern UI/UX principles, improving user flows and interface clarity and reducing navigation steps by 20% in collaboration with stakeholders.
- Created wireframes, mockups, and interactive prototypes in Figma, and iterated on each design based on stakeholder feedback to align the interface with user needs.
- Established consistent visual components and layout patterns to support a cohesive and reusable design system across pages.

IT Analyst & Programmer — Intern

Karawang Regency Archives and Library Department

Karawang, West Java, Indonesia · June 2019 – July 2020

- Designed and built an internal library management system using CodeIgniter and MySQL, covering cataloging, member records, and borrowing workflows, and contributed to requirements gathering, system analysis, and relational database design.
- Automated manual administrative processes, reducing repetitive data-entry effort by 50% and improving archival and library operational efficiency.
- Collaborated with library staff to gather requirements, tested core features, and prepared documentation to support adoption of the new system.

EDUCATION

Bachelor's Degree in Computer Science

Buana Perjuangan University, Karawang, West Java, Indonesia · October 2018 – July 2022

GPA: 3.85 / 4.00

Relevant Coursework: Data Structures and Algorithms, Database Systems, Software Engineering, Web Programming, Object-Oriented Programming, and Operating Systems.

CERTIFICATIONS & AWARDS

- Best Graduate Award — Faculty Level
- Certified Programmer

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Java, PHP, C++

Backend Technologies: Node.js, NestJS, Spring Boot

Frontend Technologies: Angular, React.js, Next.js

PHP Frameworks: Laravel, CodeIgniter

Databases: PostgreSQL, MySQL, Microsoft SQL Server

ORM & Database Tools: Prisma ORM, TypeORM, Sequelize, Foreign Data Wrapper

API Technologies: REST API, GraphQL, Swagger/OpenAPI

Cache & Search: Redis, Elasticsearch

DevOps & Tools: Docker, Git, GitHub, Bitbucket, Figma

Architecture & Concepts: REST API Design, GraphQL, Microservices, System Integration, Legacy System Modernization, Database Optimization

Methodologies: Agile, Scrum

Testing & Documentation: Unit Testing, API Testing, Swagger/OpenAPI Documentation

Operating Systems: Linux, Windows

LANGUAGES

Indonesian — Native · English — Professional working proficiency
